

Integrated Quality, Environment and Energy Management System Policy

Today, all large companies must include the principles of sustainable development in their growth strategy, i.e. focusing not only on meeting our needs today, but also on future generations. Dimoldura carries out its daily activities upholding the principles of quality, environmental and energy policies and remains firmly committed to the following:

- to objectively and continuously implement processes, procedures and working practices focused on satisfying the expectations of stakeholders and minimising and controlling environmental aspects;
- to supply quality products that meet customer expectations;
- to frequently and suitably train and raise the awareness of our employees, with the aim of further improving their skills and the performance of their assigned duties;
- to comply with client requirements as well as all applicable obligations;
- to encourage the scope of our Quality, Environmental and Energy Comprehensive Management System through continuous process improvement;
- to protect the environment by preventing and mitigating environmental impacts;
- to set goals and targets in accordance with the principles of continuous improvement so results are systematically evaluated, in order to increase the effectiveness of our Quality, Environmental and Energy Comprehensive Management System without losing sight of cost optimisation;
- to ensure the availability of all the information and resources necessary to achieve our goals and targets; and
- to encourage the procurement of energy-efficient products and services and energy-efficient design.
